

Aerodynamics	Inlet stream, aeroacoustics, propellers efficiency	Aerodynamic loads		Power required	Transition movement	Aerodynamic coefficients, wing planform	Aerodynamic loads & placement control surfaces		
Influence on airflow	Propulsion	Vibrations, engines weight, engine positioning	Noise, vibrations	Type of engine, power consumption	Engine configuration	Thrust available, mechanical & propulsive efficiency	Engine positioning, stability	Feeding system	Number of engines, alternative thrust options
Structure's shape, rotors	Noise insulation, engine & fuel positioning	Structures	Cabin size, structural strength	Allow battery storage	Hinge design, moving direction	Structure's weight & shape	Load transfer capabilities	Modularity of structure	Design philosophies & redundancy
	Minimum thrust, engine placement (noise & cg)	Payload mass, specific shape (cabin, seats etc)	Payload	Power required		Payload mass, load limits, cg position	Influence on size of control surfaces	Payload interface	Type of payload
	Power available, type of energy source	Power source size & weight, allow battery storage	Battery weight	Power Source	Power available	Range, endurance, climb rate	Power available	Power available	Power reserve
Configuration	Engine positioning, thrust vectoring	Structural integrity (max stress)		Power consumption	Folding Mechanism	Aircraft configurations	Degree of stability		Number of moving components
V_cruise, V_stall, climb rate & angle, flight envelope	Flight envelope	Load factors, flight envelope	V_cruise	Minimum power required	Aircraft characteristics	Flight Performance	Climb, turn, yaw angles and rates	Measurements (pitot-tube)	Wind & rain resistance
Influence on aerodynamic performance	Thrust vectoring	Extending mechanisms	Minimum payload mass	Power consumption	Stability of transition	Type of control surface	Control Surfaces	Control outputs	Control surfaces design
		Allow wiring		Power consumption	Transition initiation: actuators	Flight performace optimisation	Control inputs	Avionics	Sensors
Gliding capabilities	Redundancy, fire extinguishing measures	Safety factors, acceccibility for maintainance	Do not damage/kill payload, max payload mass	Fire containment measures, power reserve	Stress limits, reliability	Range of flyable conditions	Stability, controllability	Collision avoidance, health & safety status checks	Safety
